where a selected document database is stored, receive a

summary comprising only topic words related to the set of

documents which is sent, send a search input corresponding to

said summary reflecting a user's evaluation of the summary to

a server where another document database is stored, and

receive a search result accordingly, wherein said server

produces a summary of topic words relevant to the set of

documents sent by the client and transmits the summary to the

client, and searches and transmits a set of documents having a

high relevance to any desired summary sent by the client, to

the client.

REMARKS

Claims 10-18 are now pending.

Respectfully submitted,

Daniel J. Stanger
